

ChargePlace Scotland Network Management

Building on Success

Prepared by Neil Swanson, Director, EVAS

A paper highlighting the continued need for robust and consistent processes for monitoring network performance, utilisation, reliability and faults. To complement the EV fleet in Scotland, capitalising on the current installation base must include greater understanding and holistic management of the network. Identifying a route to an improved user experience for drivers, hosts and maintainers. Provide the information necessary to build on and improve an outstanding national asset.
